

# WASTE MANAGEMENT

SUSTAINABLE WASTE SOLUTIONS  
& ENVIRONMENTAL SERVICES FOR  
INDUSTRIES

[www.beets.ae](http://www.beets.ae)

# ABOUT BEETS

BEETS – Emirates Environment Technologies & Services is an Emirati environmental solutions company delivering innovative and sustainable services across waste management, wastewater treatment, NORM management, environmental remediation, demolishing, and environmental infrastructure sectors.

Our mission is to provide practical, safe, and environmentally responsible solutions that support industrial sustainability, regulatory compliance, and long-term environmental protection across the UAE and wider region.

We work alongside businesses to deliver practical, scalable environmental solutions that create real, measurable impact.

# INTEGRATED INDUSTRIAL WASTE MANAGEMENT SOLUTIONS

---

Effective and environmentally responsible waste management is essential for modern industrial operations. The proper handling, storage, treatment, transportation, recycling, and disposal of waste are critical to protecting human health, preserving the environment, and ensuring regulatory compliance. At BEETS – Emirates Environment Technology & Services, we provide comprehensive waste management solutions tailored to industrial, municipal, oil & gas, infrastructure, and environmental sectors across the UAE and wider region.

Industrial operations generate a wide range of hazardous and non-hazardous solid and liquid waste streams. Our approach focuses on minimizing environmental impact, improving operational efficiency, reducing liabilities, and promoting sustainable resource management practices.

From consultancy and engineering to facility construction and operational support, BEETS delivers fully integrated waste management services aligned with international standards, local regulations, and industry best practices.

# Consultancy

BEETS provides specialized consultancy services to help organizations improve waste management performance, regulatory compliance, and sustainability outcomes.

## Our consultancy services include:

- Risk assessments & feasibility studies
- Waste management master planning
- Waste characterization & classification
- Environmental compliance audits
- Waste handling procedures & protocols
- Recycling & reuse strategies
- Waste minimization programs
- Environmental management support

Our team supports clients in identifying opportunities to reduce waste generation, improve segregation processes, enhance recycling performance, and optimize overall waste management operations.

## We also provide specialist consultancy in:

- NORM waste management
- Asbestos handling
- Drill cuttings management
- Oily sludge treatment
- Tailings management
- Hazardous chemical waste
- Basel Convention compliance

**We provide integrated waste management solutions designed to support industries, infrastructure projects, and communities in managing waste safely, efficiently, and sustainably.**

From hazardous and non-hazardous waste handling to recycling, transportation—our services are built around operational excellence, regulatory compliance, and environmental responsibility.

# Engineering & Design

The success of any waste management facility begins with effective planning and engineering design.

BEETS provides complete engineering and design solutions for waste management infrastructure ranging from concept development to fully integrated operational facilities.

Our engineering services include:

- Waste management & treatment facilities
- Hazardous waste storage facilities
- Waste transfer stations
- Recycling facilities
- Sanitary landfills
- Landfill rehabilitation & closure
- Equipment specification & procurement
- Project management services

We design systems capable of handling a broad range of hazardous and non-hazardous waste streams while ensuring operational safety, environmental protection, and long-term efficiency.

# Construction & Operations

BEETS supports clients through the construction, commissioning, operation, and maintenance of waste management facilities across a variety of operational environments, including remote and industrial locations.

Our operational services include:

- Waste segregation
- Collection & transportation
- Waste processing
- Recycling operations
- Packaging & export coordination
- Final disposal solutions
- Hazardous material spill response
- Facility operation & maintenance

Specialized facility solutions include:

- Industrial waste management facilities
- Hazardous waste storage sites
- NORM waste management facilities
- Produced water treatment plants
- Wastewater treatment plants
- Soil remediation facilities
- Contaminated site rehabilitation projects

Using precision-engineered ultra-high pressure cleaning technologies, BEETS ensures effective contaminant removal while minimizing water consumption and secondary waste generation through integrated recycling systems. All cleaned materials undergo strict clearance measurements and quality verification processes before release.

## Sustainable Waste Management Philosophy

At BEETS, we believe waste should not simply be discarded – it should be managed as a resource wherever possible through sustainable environmental practices.

By implementing responsible waste management systems and circular economy principles, organizations can achieve substantial operational, environmental, and social benefits.

### Economic Benefits

- Improved operational efficiency
- Reduced disposal and treatment costs
- Better resource utilization

### Social Benefits

- Reduced risks to human health
- Safer working environments
- Improved community and environmental wellbeing

### Environmental Benefits

- Reduced environmental impact
- Increased recycling & reuse
- Lower dependency on raw material extraction
- Enhanced sustainability performance

# OUR SERVICES & CAPABILITIES

BEETS provides fully integrated environmental and waste management solutions including:

Environmental  
Consultancy

Environmental  
Remediation  
Services

Laboratory  
Testing

Engineering &  
Design

Equipment  
Procurement &  
Supply

Hazardous Waste  
Management

Waste  
Transportation &  
Logistics

Operations &  
Maintenance

Construction &  
Installation

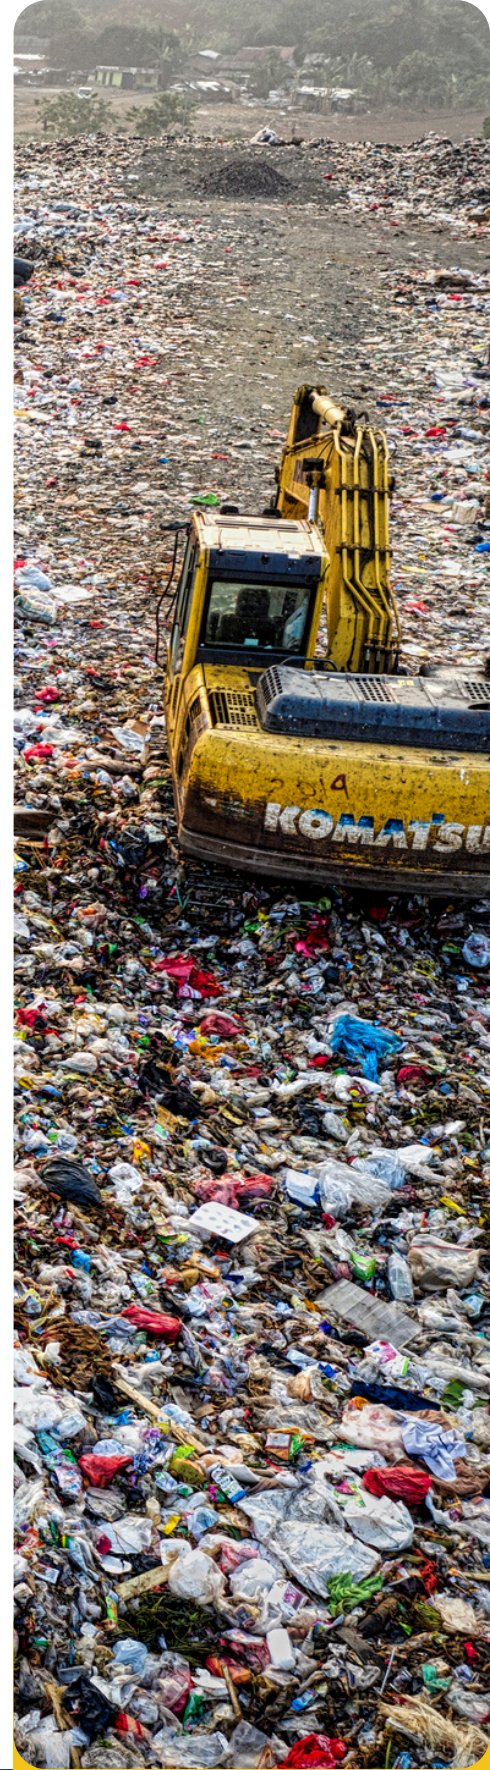

A person wearing a white protective suit and blue gloves is holding a round-bottom flask containing a yellow liquid. The person is standing in a body of water, possibly a river or stream, with a dark blue background. The text is overlaid on the image.

For us, environmental responsibility is not a checkbox, it's a commitment to protecting people, preserving resources, and shaping **a more sustainable future for the GCC region & globally!**
